Academic Tutorial Programs

MathHub offers programs specially designed to cater to the needs of students and their parents. Our teachers adapt to and work around the curriculum of the schools where students attend. We offer one-on-one and group academic tutorials for grade school, high school and college.

Singapore Math

For students who want to build competency or sharpen problem solving skills. Singapore Math is a teaching method that helps students learn fundamental arithmetic skills by using drawings to represent word problems. **MathHub** offers a starter and a booster program in Singapore math that will add to or complement your school's math curriculum.

MathHub Achiever

For students who want to excel in school or to simply do advanced study. **MathHub** customizes a unique learning program for each student that will enhance what is taught in school and cater to the unique academic interests of the student.

MathHub Support

For students who want to reinforce lessons in schools and improve academic performance. This program helps students to keep up with their classes and be not left behind. **MathHub** can complement what is taught in school by providing additional drills and exercises on concepts that students find challenging.

MathHub Reinforcement

For students who barely pass or sometimes fail exams. **MathHub** is committed to help students understand their school lessons in a way that is less overwhelming and at a pace that they are comfortable with. Our teachers will work with students and their parents to design a program that will address the students' special learning requirements.
